Integration & Software Developer

Experienced Software Developer with 5+ years of delivering enterprise-grade integration solutions using **C#, .NET, REST APIs**, and **event-driven messaging systems** such as **Kafka**. Specialized in **system integration, API design**, and **CI/CD deployments** using **Azure DevOps** and **OpenShift**. Proven ability to build scalable, reliable services that optimize digital operations. Passionate about simplifying complexity through clean architecture.

Professional Experience

Integration Developer

TFG (The Foschini Group) | Western Cape, South Africa

Mar 2021 – Present

- Engineered and maintained integration solutions using **BizTalk Server 2013/2016**, managing schemas, maps, pipelines, and port filters.
- Developed and maintained **RESTful APIs** with **C#/.NET Core** to streamline data communication between internal systems.
- Built reconciliation APIs that collect store-level financial data from Kafka topics and send it to banking partners with high reliability and performance.
- Designed and implemented **end-to-end ETL pipelines** for internal finance, EDW, and PMM services, ensuring real-time data delivery and transformation.
- Integrated services with **SAP**, EDW, and MessengerDys components, ensuring accurate message delivery and backend processing.
- Led integration of **Tradecloud (ITM)** services with **SAP**, building message-driven APIs to fetch accounting events, enrich data, and coordinate between internal services and external systems.
- Built and consumed APIs over the **SAP API Gateway**, focusing on security, reliability, and proper message acknowledgements.
- Owned the full integration lifecycle: development, testing, UAT, and support for **ITM + SAP** communication.
- Frequently maintained and supported production-grade APIs, serving as part of a weekly rotating **standby support** team.

- Implemented **Kafka-based messaging** (Confluent and Apache), including producers, consumers, offsets, and partitions for high-throughput event handling.
- Delivered containerized services via **Red Hat OpenShift**, automating deployment pipelines using **Azure DevOps**.
- Maintained Git repositories, performed code reviews, and aligned with dev stands for secure, reliable deployments.

Graduate: Digital Business Solutions

Datacentrix | Cape Town, Century City

Feb 2020 – Jan 2021 (1 yr)

- Migrated legacy applications to web-based servers, increasing system availability and performance.
- Refactored and debugged existing applications, improving maintainability and performance.
- Created automation tools for internal and client use (e.g., data parsers, validation utilities).
- Designed and tested APIs using **Postman** (RESTful GET/POST), integrating external services.
- Worked on **SharePoint** development and content management, including site updates and form-based automations.

Core Skills

- **Languages:** C#, Java, JavaScript, HTML, XML, XAML
- **Frameworks:** .NET Framework, .NET Core, ASP.NET MVC, Entity Framework
- **Integration:** RESTful APIs, SOAP, Kafka, BizTalk, API Gateway, FTP/SFTP
- **Cloud & DevOps:** Azure DevOps, CI/CD Pipelines, Docker, OpenShift, Kubernetes
- **Data:** SQL Server, Oracle, JSON, XML, XSLT
- **Testing:** Unit Testing, TDD, Debugging
- **Architecture:** Event-Driven, Microservices, SOA, HL7, FHIR
- **Collaboration:** Git, Agile, Scrum, Intent Architect

Education

2015 – 2019

BSc in Computer Science
